

Levered Learning Math

Maximize the impact of your ELOP

One of the most promising opportunities offered by the state of California is the new Expanded Learning Opportunities Program (ELOP), outlined in Ed. Code Section 46120. The program provides funding for afterschool and summer school enrichment programs for TK-6th grade.

The CDE states, *"It is the intent of the Legislature that **expanded learning programs are pupil-centered, results driven, include community partners, and complement, but do not replicate, learning activities in the regular schoolday and school year.**"*

Get Back On Track with Levered

We'll work to ensure that your upper elementary students get the support they need to get back on track for success in math.

Active and Engaged Learning

Enrich the understanding of key math concepts for 3rd-5th grade students. Levered is a research-based instructional program that supports the core math instruction students receive during the school day, in a fun, interactive format.

Skill Building

Levered math is a competency-based program, where students are required to demonstrate their fluency with basic math skills before they move on to more advanced skills and concepts. As they work to demonstrate mastery, they further develop their persistence and grit.

Diversity, Access and Equity

Levered is designed specifically to support Multilingual English Learners through embedded SDAIE and GLAD® lesson design. Levered holds a 3rd party validation from Digital Promise for Learner Variability, and the program's individual pacing accommodates a wide range of diverse learners.

Community Partnership

Levered is ready to partner with you to fill in critical gaps in math learning. Levered provides professional development to instructors, and ongoing support and coaching to ensure that the program is used effectively to meet the needs of all students.
